

# Virtual Pro Assist

## Real-time remote jobsite support

Ever been stumped by messy wiring? Can't find the part you're supposed to replace? Need another set of eyes on a problem you've been working on all day?

Virtual Pro Assist is like having a technical service advisor on site with you. This easy-to-use intuitive and innovative software brings the real-time remote jobsite support to you.

### MORE THAN A PHONE CALL

Virtual Pro Assist is a merged reality livestream solution that utilizes your phone's existing screen and camera. Once a video call is initiated, users on both ends of the call can draw, circle or highlight areas where jobsite support is needed.

### EASY BUILT-IN USER FEATURES

If you're the one providing the help, you can take control of the program's built-in tools to freeze images, upload spec sheets and diagrams for easy access and record help sessions for future reference.

### MULTI-DEVICE COMPATIBILITY

Virtual Pro Assist is compatible with almost every camera equipped mobile device and can be used across your company's computers as well. That way your technicians can receive the virtual "hands-on" assistance they need from any device in any location.

**All of this for just \$360 per year\*!**
