

Introducing Trane® Home

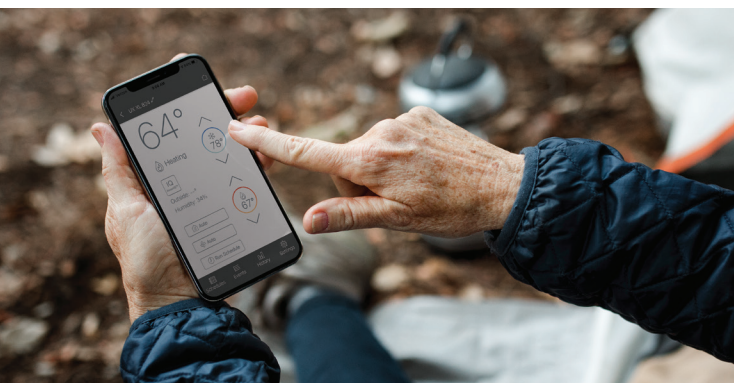

WHAT IS IT?

The Trane Home app allows you to optimize the comfort and efficiency of your home by connecting directly to your smart thermostat.

What's the benefit of the app? Well, you can:

- › Control, monitor, and schedule your home's HVAC system from anywhere.
- › Create and edit automations to simplify your daily routine.
- › Customize your settings (Dark Mode, Left-Handed Mode, Energy Savings, etc.).
- › Enable geofencing, allowing you to update your HVAC system based on the location of your app-enabled device.
- › Integrate with your Google Home™ or Amazon Alexa™ account for simple voice control actions.
- › Add hundreds of Z-Wave® products (from sensors to ceiling fan switches to smart plugs) to customize the comfort of your home.

With just the touch of a button, Trane Home gives you control over your smart comfort—all so that you can connect with your home, even when you're away.

RUN YOUR HOME FROM WHEREVER LIFE TAKES YOU.

¹Remote Climate Access is included with the purchase of a connected control. Adding accessories to your system requires a monthly subscription for remote access via most web-enabled smartphones and computers.

GETTING SET-UP

Follow the simple, three-step process outlined below in order to get your Trane Home and smart comfort system installed, downloaded and connected.

1

STEP 1: SELECT & INSTALL

Select the Trane smart thermostat that will work best for your home by asking your Dealer or visiting Trane.com to explore the options. If you don't have a Dealer, check Trane.com for the nearest one. You can then schedule a date and time that your Dealer can come and install your selected thermostat.

2

STEP 2: DOWNLOAD THE APP

Search the Apple Store or Google Play store for the free Trane Home App. Download the app, create an account and connect to your thermostat to get started.

3

STEP 3: ENABLE DIAGNOSTICS

If there is a potential issue with your system, an alert is sent directly to your preferred Dealer so they can remotely assess the data, diagnose the cause, and determine a plan of action. System alerts can proactively help prevent potential issues before they even occur.
