

Heating and cooling solutions for any space

Make your comfort zone

Mitsubishi Electric all-climate heat pumps allow homeowners to heat or cool a single zone or individually control up to eight indoor units with a single outdoor unit. Customize comfort in distinct areas of your home. Turn off units in rooms not in use, or adjust the temperature in one room only, like when your kitchen gets too hot while cooking a holiday feast.

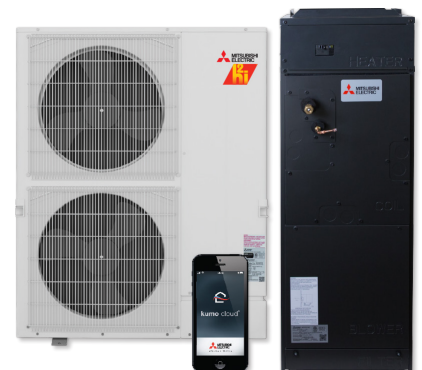

Eco-friendly and efficient

As old furnaces and HVAC systems reach the end of their lives, it is important to consider what new solution will work for your whole home, is the most energy efficient, and will be best for the environment. Going all-electric will bring you the most benefits in the long term. Compared to conventional gas-powered options, modern all-electric systems can deliver superior performance, while also saving you money on energy bills and cutting carbon emissions. In an all-electric home, Mitsubishi Electric's mini- and multi-split heat pumps provide space heating by moving outdoor heat energy indoors using refrigerant. This method enables the heat pump to provide more energy as heat than it consumes in electricity and requires no fossil fuels. During hot weather, the system reverses the process and transfers indoor heat to the outdoors to provide air conditioning.

Work Comfortable

The office today is not the same as 30 years ago. More people work from home and need ways to make their home-office environment comfortable, energy efficient, and healthy. Stylish and innovative mini-split air conditioners and heat pump provides personalized comfort, lower energy costs, zero emissions, and ultra-quiet heating and air conditioning in any climate. Now working from home can feel more comfortable.

Game rooms to home studios

Traditional, contractor-grade HVAC systems are not set up for energy optimization, health, or comfort. This can result in rooms being too hot or too cold. Mitsubishi Electric puts room-by-room comfort in your hands.

Deodorizing Filters

Indoor air quality (IAQ) can have a significant impact on comfort, and choosing the right HVAC systems can improve IAQ. Most indoor unit comes with multi-stage filters to capture and remove contaminants that trigger allergy and asthma symptoms, spread illness and impact IAQ.

Healthy Lifestyle

A home gym is an ideal place for a ductless or ducted mini-split system. Platinum Deodorizing filters in select systems use nanotechnology to absorb odors and neutralize even the worst smells, a must-have for an frequently used home gym, whether it's in a bedroom, attic, or garage.

Any room, any home

Mitsubishi Electric Heating and Air conditioning systems help you increase the comfort in one room or your whole home. Take control of your comfort and IAQ while also getting a return on your investment. You deserve a home designed for your comfort.
